SAP Business One provides a broad range of features such as reporting, CRM, ERP, and mobile applications. As of June 2013, SAP Business One can be accessed online in Europe and North America, for example through your desktop computer, mobile device, and tablet. You can connect your SAP Business One solutions to external data sources like SQL Server, Oracle, and UNIX and Linux. You can easily create and populate the tables in SAP Business One, and run reports. SAP Business One includes mobile capabilities to make it easier to access your data wherever you need to. Your business processes are mapped to tables. You can use these tables to access your data, run reports, or export to spreadsheets. The processes are simplified into predefined workflows that you can use to quickly access, create, or modify data. SAP Business One keeps your data in sync by making updates to tables automatically. SAP Business One allows you to analyze and interpret data through reporting, data mining, and scorecards. You can sort and filter your data in a variety of ways. You can create interactive dashboards that are dynamic and updated in real-time. SAP Business One includes the ability to export to SAP or to the Microsoft Excel or Microsoft Access formats. SAP Business One CRM integrates with a variety of third-party applications, such as Salesforce, Siebel, and PeopleSoft. You can access all these applications through a single user interface. SAP Business One is easy to set up. There are no interfaces or screens that require a deep understanding of SAP Business One. All the required fields for each record are clearly displayed on the screen, and help and information is readily available. To learn more about using SAP Business One, watch the videos in the installation guide or watch a short demonstration video below. Why Use SAP Business One? Reasons to implement SAP Business One Data management: SAP Business One can help you manage your data from your desktops, laptops, mobile devices, and tablets. Comprehensive, centralized access to your data: You can access your data from any device anywhere at any time. Integrated processes: SAP Business One automates business processes by connecting them to tables. Personalization: SAP Business One can personalize its dashboard design and the information it displays. Interactive dashboards: You can create interactive dashboards that are dynamic and updated in real-time. Ease of use: f3e1b3768c
