In WCF, you can use HttpContext.Current.Request.QueryString["parameterName"] to get the value, and HttpContext.Current.Request.Form["parameterName"] to get the value. But in ASP.NET, these are not available. Anyone know how to get the values? A: Try Request.QueryString["parameterName"] to get the value. Form collection can be accessed in ASP.NET via Request.QueryString. Hope it helps. Q: Using user name in command line options in C I am trying to understand how I would pass the user name into 2d92ce491b
