Panasonic Communications Co., For Windows and Windows XP. Data, big data, cognitive computing, operational research, business intelligence Havens and Michael start with a review of cognitive computing systems, which include natural language processing (NLP) as part of their core business intelligence function. They find that the 'big data' revolution has been driven by the availability of enormous volumes of structured data such as transaction databases, which have provided good support for traditional business intelligence tools. However, the introduction of NLP has made it possible to use cognitive computing tools to produce analysis from unstructured data and this has driven a bigger emphasis on big data, with cognitive computing tools as an important part of the solution. Michael has produced this IDC report, which is available for free from the IDC website. Alternatively, the full report and other Free IDC Report downloads are available to members of the
