Express Scribe is a professional audio player software for PC,. Express Scribe is not a transcription software, but it supports the Microsoft. Q: Xcode 4.3 - xcodebuild with makefile does not work as xcodebuild I have installed xcode 4.3, and when I was trying to use

makefile to compile, it shows error like this: /Developer/Platforms/iPhoneOS.platform/Developer/usr/bin/gcc-4.2: not found But when I was typing 'xcodebuild' directly, it runs normally. So I have to use 'xcodebuild' instead of 'make' command. Any solution to fix this problem? Thanks. A: This is a Xcode bug. You can't use makefiles in 4.3. They are broken in the earlier 4.3 builds. /* Copyright The Kubernetes Authors. Q: What is the use of CORS when users of the website are on different machines? I do understand the benefits of using CORS but this is about two users from different machines accessing a website. So what will happen if the user on Machine A wants to make a request to Machine B? Will the request be rejected? If yes, what would be the point of using CORS? I am really confused with this concept.

A: The users have the same origin (for example, www.example.com), so requests will be allowed. The server can send any cross-origin response, so the browser has to handle it.
