Notes References Further reading External links Category:Pharmacology journalsImage copyright Reuters Eco-friendly fashion giant Uniqlo has launched a new clothing line made from leftovers from food production. The company is aiming to find new customers for the scraps from its suppliers' and its own production lines. As well as producing apparel from its own fabrics, the firm says it will source from other suppliers. Its customers will be able to recycle what they don't want as a by-product. The new clothing line, known as Juicy Couture, will be sold in 200 stores and online. Sixty-three percent of textiles are made from virgin fibres - which are taken from trees - as opposed to recycled materials. So far, 40 different materials have been used in the new clothing line, including sheepskin, chenille, velvet, polyester and cotton. 'Absolutely innovative' Uniqlo plans to produce six different collections of the new line each year, with the first collection launching this month. The idea is to meet a growing demand for more eco-friendly clothes that are good for the environment and the wearer, with designers creating new looks from old fabrics. "It is absolutely innovative," said Richard Walker, Uniqlo's chief creative officer. "We have the potential to actually look at what the world is throwing away." Image copyright Uniqlo Uniqlo's clothing line is just the latest of several products to try to recycle textiles. In 2016, fashion brands such as Calvin Klein and Gap released their own versions of the traditional T-shirt. Uniqlo 2d92ce491b
