

can someone help me with a question about a bad sd card i had a 8gb sd card and it worked fine till i formatted it after formatting i think it had some type of damage to it it keeps crashing my laptop whenever i restart my computer i get a black screen i can boot ubuntu though it only happens when the laptop is restarted i think ubuntu detects the bad sd card and blocks me from booting into ubuntu any ideas? is there a way to format the sd card to try and fix it? if anyone can help me i would greatly appreciate it !details |

Coco Coco: Please elaborate; your question or issue may not seem clear or detailed enough for people to help you. Please give more detailed information; for example, we might need errors, steps, relevant configuration files, Ubuntu version, and hardware information. Use a!pastebin to avoid flooding the channel. ubottu: I don't know if i explained myself correctly but i'll try again. Coco: I am only a bot, please don't think I'm intelligent :) So my sd card is behaving strangely, it was working fine till i formatted

---

it. I think this might be because of a bad SD card or a bad connection from my computer. Every time my computer is restarted the screen turns black. I can boot into Ubuntu though, but not into Windows 8. I think Ubuntu detects the bad SD card and blocks me from booting into ubuntu. I was wondering if there is a way to format the SD card and try to fix it, if there is please let me know So my sd card is behaving strangely, it was working fine till i formatted it. I think this might be because of a bad SD card or a bad connection from my computer. Every time my computer is restarted the screen turns black. I
