User Interfaces AutoCAD's user interface is highly customizable, with user interface builders available for Windows, Macintosh and Linux platforms. The user interface can be customized by: Modifying the default font settings Modifying the default line thickness Modifying the default text formatting Adding or removing toolbars, menus, palettes and windows Adding and modifying toolbars, palettes, menus, windows, text, and the status bar Adding and modifying preferences and menus Using plug-ins or customization programs to add features not available in the main program. AutoCAD does not include a component-based application, so the developer must take care to create the visual elements (usually in the form of controls) that can be customized by the user. The core user interface consists of: a Command Line toolbox: a series of windows that can be dropped on the AutoCAD workspace (hence the "command line") a status bar: the main container of information, including the system time, number of commands executed, page number and current drawing a canvas: the most important part of the interface; it can be modified by dragging and dropping objects (also called "items") to the canvas, or created as a blank canvas. An image can be placed in the canvas to represent a model. The item may have a reference to any drawing stored on the computer; also, a drawing's grid can be copied to the canvas. When the drawing is viewed, the grid is automatically projected onto the canvas. menus and toolbars: the means of accessing menus, toolbar buttons, and tool options; each menu and toolbar can be customized by the user Although the user interface may seem complicated, it is much simpler than AutoCAD's technical user interface. LISP The first custom programming language for AutoCAD was AutoLISP, a functional extension to Visual LISP for AutoCAD originally created by Josef Kilian. AutoLISP is known for its very expressive and concise syntax, and it includes many features for geometry and programming. Many third-party tools for AutoCAD exist that use AutoLISP, such as AutoLISP for AutoCAD: - Autodesk Vault - AutoCAD.com - CityDesk AutoLISP - Skunkworks - Apex - Edje-macros Visual LISP Visual LISP was first introduced in 5b5f913d15
