Their unique interface organizes them by folder, file type, and date, and they let you open them right in AutoCAD to work on them. As usual, there are more details. A short video of the new Archivists will be available soon. Archivists from Previous Releases: If you still want to explore the Archivists, they're all there, just open the menu `Help > Learn & Practice > Automation Reference > The Archivists`. Navigation and Erase With navigation commands, you can choose between the features of the base drawing as well as all child drawings. Additionally, you can choose to enable or disable the DGN/DWG-Compatibility Mode. In this mode, you can use commands like `Track To/From` and `Undo/Redo`. If you use the new Navigation History, you can select any drawing in a previous session and use the commands from that drawing. Erase mode is now accessible with `Esc`, which includes `Fill Color` and `Stroke Color`. Better Erase from History: For better erase from history, let the next drawing overwrite the previous drawing. When you erase from history, older drawings are overwritten with the current drawing. If you select the `Overwrite` setting, the next drawing will overwrite the previous. Improved Erase from History: In the previous release, you could choose between a single or a multiple document erase from history. With this release, that has been extended to multiple document erase.
