unzip.exe and in folder like you get and click extract button and extract the folder which have all.exe files inside it and save them on desktop. winzip is available in the market just replace the file manager.exe in all the link now start the.exe file if it opens then paste the url, start config all necessary. in this way you can download as many as it needs. Animation using Compass/GSAP not working on mobile I can't get some animation to work properly on mobile devices when using Compass with GSAP. The box goes through the animation, but it's kind of glitchy and it doesn't seem to take position: absolute into account. Am I missing something simple here? JSFiddle of the problem The box should move down when it's hovered over, and when it's not, it should stay in place. It works fine on desktop, but on mobile, it has this strange glitch. A: It seems like it's an issue with the "glitch" being attributed to the box being below the navbar. I would use the enter keyframe and leave out the bottom padding. It could cause a larger issue though if you add some more keyframes to move it up slightly. If you do decide to leave out the padding, make sure to also remove the top margin to make sure it's flush. Here's the CSS changes I made to make it work: @keyframes my-down-animation { 0% { left: 50%; top: 50%; transform: translate(0,50%); } 100% { transform: translate(0,0); } } .content { position: absolute; top: 100%; left: 50%; margin-left: -220px; width: 400px; height: 135px; padding: 0; background-color: #1a1613; animation: my-down-animation 0.35s ease-in-out infinite alternate; } @ 3e33713323
