The system provide simple graphical database tools which permits to design and run database development process. It is an interactive package which can be easily used by novices and experienced users. As a best feature, you can use the kit without installing the database. Because SQLWave Product Key package is an independent and integrated package. Some of the tools can be executed directly from kit or through "auto execute" option. This is the development and documentation of the SQLWave package, or the project to make database development process easier, faster and more intuitive. The structure of SQLWave is as follows: 1. Database Class: The package provides a Database class to handle the db operations that are used by the GUI tools. In order to generate the SQL statements, it uses the Database class to manage the target database and to return the result. 2. Generator Class: The Generator class is a Database class that will generate some SQL statements, which include SELECT SQL statements and INSERT SQL statements. 3. SQL Workshop: The SQLWorkshop class will be used to design compound SQL statements, in order to build the SQL statements to the generated SQL statements. The SQL statement in SQLWorkshop is more efficient than the generated SQL statement. 4. SQL Wizard: SQLWizard is a MySQL GUI tool that helps users to explore and manipulate the existing databases and SQL scripts. Features SQLWave GUI Tools are designed for MySQL database management system. In addition to the MySQL tools, it also includes an Advanced Query Language (AQL) for other SQL databases. The GUI tools of SQLWave package are provided with the following features: Select, Insert, Update, Delete, LOAD DATA INFILE, DELETE, UPDATE, REPLACE, INSERT, LOAD DATA DATA INTO TABLE, DROP TABLES, ALTER TABLE, CREATE TABLE, CREATE INDEX, CREATE VIEW, CREATE FUNCTION, DROP FUNCTION, DROP VIEW, TRIGGER, TABLE STATUS, SHOW VIEW, SHOW FUNCTION, EXPLAIN, OPTIMIZE TABLE, FLUSH TABLE, USE INDEX. Compound SQL statement design and creation, for a better understanding and maintenance of database. Easy handling of compound SQL statements and data. More intuitive way to manage database: new database creation, database administration, database design, data exploration and data manipulation. Support for special character set like Chinese, Japanese, etc. References Category:Open source database management systems Category:MySQLMaternal mortality in Papua New Guinea.
