The company claims that AutoCAD is the most widely used software for designing large-scale projects in the U.S., Australia, Canada, Mexico and Great Britain. History AutoCAD was designed and marketed by AutoDesk, a software development company, in 1982. The company was founded by two MIT graduates, Lloyd Buell and Chris Shaw. Both were working at General Motors at the time, where they were working on the production of a new car design with computer aided design (CAD) software. The company's first product was called the CarWriter and the company's first office was in a converted garage. The first version of AutoCAD was released in December 1982 and the company was officially established in June 1983. In the 1990s, AutoDesk, a company founded by three MIT graduates, had revenue of about \$500 million. The company announced plans to build a bigger headquarters in Medford, Massachusetts. After five years of serving as chief software architect, John Hasenmiller was named chief executive officer of AutoDesk in February 2010. He had previously served as executive vice president of the company. Videoconferencing tool In March 2002, AutoCAD announced the release of the first version of AutoCAD Connect. Shape Properties and Geometry At the core of every shape is the information that defines how it is built. At the same time, the shape has physical properties that specify its size, orientation, and so on. In many cases, these two things—a shape's core shape information and its physical characteristics—are related, but they are still distinct pieces of information. For example, the bottom of a cylinder is its core shape information. It has a specific radius, and it can be constructed with straight line segments or curved arcs. But the bottom of a cylinder is also a physical shape that must be laid out on paper or screen. The most essential physical properties of a cylinder are its radius and height. Shape properties Shape properties are a new concept in AutoCAD. They apply only to shapes, so they have no place in the Properties palette. The shape properties are as follows: Creates a shape that, when moved, rotates, or changed in size, automatically updates all shape properties. Defines the location, size, and rotation of the shape. Defines a fill pattern, including color, for the shape. Includes properties that affect the shape's fill and outline. For more information about shape properties, see Shape Properties in the Guide. New improvements to shape properties The following enhancements have been made to shape properties: You can now define any shape property, including fill and outline properties, to affect a shape at any time. Shape properties have been enhanced to work with line colors. Properties for Rounded corners are now available. You can now use a shape's properties to manipulate the fill pattern of a shape. You
