Field of the Invention The present invention relates to an implantable prosthesis and, more particularly, to an expandable stent which is inserted into a lumen, such as a blood vessel or a coronary artery, and which is expanded in situ to maintain the patency of the lumen. 2. Description of the Related Art The art of implanting expandable prostheses within a lumen of a patient has been known and has been used effectively to provide support to a lumen and to maintain the patency of the lumen. More recently, endoluminal prostheses have been developed which seek to remedy physiological conditions wherein a native valve leaflets, which normally open, close, or don't open at all in a particular situation, are replaced by implanting a prosthetic valve. The native valve leaflets are diseased or compromised and are not able to function properly. A prosthetic valve can be implanted in the body to provide an alternate pathway of blood flow, for example, between an aorta and a ventricle, through a native valve that has become incompetent or paralyzed due to birth defects, disease, or aging. Although generally successful, a limitation with these prosthetic valves is that the prosthetic valves tend to fail prematurely due to a lack of mechanical integrity of the prosthetic valves. The time frame for prosthetic valve failure is typically within approximately five years. Prosthetic valve failure usually requires replacement of the prosthetic valve with a larger, more invasive valve. The rigors of the inside of the arteries and veins which are the pathways for the blood flow are sufficient to cause the walls of the lumen to become somewhat inelastic and somewhat thickened. In some instances, a weak area of the lumen wall can cause a prolapse of the area. The problem becomes particularly acute in the elderly, whose vasculature becomes more rigid with age. Such a prolapse of the wall makes it difficult for the prosthetic valve to work effectively and requires the implanting of a larger prosthetic valve. The larger valve is usually even more difficult to implant and can require major surgery. Although stents have been used to treat portions of a vessel having a lumen there through, stents have not been well suited for implanting within a heart and, in particular, 3e33713323
