### What's New In?

The QuickDev Debug Agent allows the debugger host to perform a remote debugging via the network. The debug agent provides visual representation of the debugger host and the target, making it easy for users to monitor the connection status as well as target status. The debug agent also provides message logging which can be used as an additional tool for debugging and testing. Features: Network connection Status: The debug agent is able to monitor the network connection status of the target PC and notify user if the connection with the target is lost. The connection status is displayed in the graphical user interface. The connection status can be used to quickly locate the problem for example in case the target PC is disconnected from the network. Status of the target: The status of the target process is displayed in the graphical user interface. The status of the target process can be used to quickly locate the problem for example in case the target process crashes. Use Cases: The debug agent can be used for: - Monitoring the connection status of the target PC - Display the status of the target process - Visual representation of the debugger host and the target in the graphical user interface - Message logging which can be used as an additional tool for debugging and testing How To: The debug agent can be used to perform remote debugging on the following platforms: - Windows 2000/XP/2003/Vista - Windows 98 - Windows Me - Windows NT - Windows CE - Windows Mobile - Mac OS X (10.4.8 and 10.4.9) How To: To start the QuickDev Debug Agent, simply run the DebugAgent.exe program. To use the QuickDev Debug Agent, the following procedure is required: 1. Connect the computer hosting the QuickDev Debug Agent to the target computer. 2. Start the QuickDev Debug Agent. 3. The QuickDev Debug Agent will automatically connect to the target computer. When it connects to the target computer, the connection status will be displayed in the graphical user interface. The QuickDev Debug Agent can be used to monitor the connection status. When the connection status is lost, the QuickDev Debug Agent will notify the user. 4. If the QuickDev Debug Agent has connected to the target computer successfully, the connection status will be displayed in the graphical user interface. If the target process is running, the status of the target process will be displayed in the graphical user interface. 5. If the QuickDev Debug Agent is disconnected from the target computer, the connection status will be displayed in the graphical user interface. The QuickDev Debug Agent will notify the user. Use the QuickDev Debug Agent for remote debugging the following processes on the target computer: - Visual Studio.NET, Visual C++, C# - Any.NET application

---

## System Requirements:

OS: Windows 7, Windows Vista, Windows 8 Windows 7, Windows Vista, Windows 8 Processor: Intel Core 2 Duo (2.4 GHz) or better Intel Core 2 Duo (2.4 GHz) or better Memory: 2 GB RAM 2 GB RAM Graphics: Intel HD 4000 or better, Radeon HD 5650 or better Intel HD 4000 or better, Radeon HD 5650 or better DirectX: Version 11 Version 11 Network: Broadband Internet connection Broadband Internet connection Sound Card: DirectX 11-compliant sound card
