EA SPORTS introduces the new FIFA 22 audio engine in tandem with the reveal of FIFA 21 Ultimate Edition. The FIFA 22 audio engine was used for FIFA 21, and it made its way to FIFA 22 as well. The FIFA 22 audio engine will bring some welcomed upgrades. In FIFA 21, the aural experience got a major revamp. No longer would players hear what FIFA call 'audio failures,' and the audio itself would be more natural. Having said that, the engine featured in FIFA 21 is still impressive. FIFA 22's sound is much richer in the game. This is due to its use of EA's proprietary audio sample library. The AI teams are no longer controlled by pitchman Donny Deutsch. FIFA is a series of association football video games that were initially developed and published by Electronic Arts, and later by its own subsidiary, EA Canada. The first game, released in September 1991, featured a career mode that gives players the opportunity to train and play professional club matches in real time. FIFA grew to become the largest selling soccer video game of all time, with seven installments released to date and more than 800 million copies sold. What does FIFA '22 have to offer? FIFA '22 is the second of the new 'genome' series of games. It is the first game to be fully developed and created by EA Canada instead of EA's previous UK subsidiary (and the first game in the FIFA series since the 10th installment, released in September 2009). 'Genome' is an evolution of the series, with elements from previous games stripped out and replaced with new advances in physics and artificial intelligence. Over two decades after its release, you can still see the legacy of the DNA series when you play. Both EA Canada and Electronic Arts intend to bridge the gap between video game and real life football with this '22 edition. The game is built from the ground up to create an immersive and accessible experience for new and returning fans alike. From the ground up. FIFA '22 - the game A couple of the year's biggest headlines at EA Sports, FIFA '22 was the first of the FIFA series to be in development on a brand-new engine. It was also the first year EA Canada was fully in charge of game development. This unprecedented situation presents some tough questions as to how EA will adapt to the wider financial, political and cultural landscape. Can it continue to make games that only its own direct customers can appreciate? The first experience that the public has of the '22 FIFA is therefore, unavoidably, a simplified one that sees the game reduced to a collection of single-player modes and social features that cannot adequately represent the gameplay of a licensed video game. In its current incarnation, FIFA '22 is a huge leap forward from the series' roots as a set of small, but wonderfully addictive, football games that were designed to entertain people who didn't like football. FIFA '22's new technology allows for improvements in AI and Player Movement As proof of its own technical abilities, EA has even gone so far as to create bc9d6d6daa

A new way for fans to enjoy and build their own Ultimate Team. The most comprehensive set of cards in the game will challenge even the most accomplished collectors to go beyond the basic cards and unlock some of the most coveted players and kits in the game. Ultimate Team - Become the ultimate football (soccer) player and assemble the best team for FIFA 22! Player Impact Engine - The new Player Impact Engine is the most refined and sophisticated contribution to the gameplay of FIFA since the arrival of the Next Player Technology. We have increased the number of animations, and made every single animation more detailed and fluid. We have increased the number of collision possibilities to make for more natural and unpredictable player behavior, and we have made the artificial intelligence (AI) throughout the game smarter and more robust than ever before. We have also completely reworked the way players run - with improved sight lines, more control of your feet, improved collisions and more - while working to recreate more of the real-life feel of a soccer field. Real World Player Behavior - We studied and re-created the natural movement of the players to give fans a better sense of what it means to be a soccer player. Last Minute Magic - The new Last Minute Magic feature lets you choose a player not in possession of the ball, and the player will run to where you've designated on the field. Last Minute Magic gives you total control over a player's movement, allowing you to set up perfect plays with a little extra help. Referee Engine - Referees now react to fouls more reliably and consistently than ever before, allowing them to display more emotion and increase their influence on the game. Tactical Decision Making - We've improved the way you place your team in positions in possession, while still maintaining the fast, fluid gameplay that fans love. In the Tactical Decision Making engine, players will now take on the roles of real players, resulting in realistic and unpredictable moments. Ball Control and Ball Retention - We have improved the way that the ball bounces, allowing teams to play more tactical, and even keep possession in the final minutes of the match. The new Ball Control and Ball Retention technology is a fundamental improvement in the game.

### **What's new:**
